EXAMINER

HANNETT, JAMES M

ART UNIT

PAPER NUMBER

2612

DATE MAILED: 11/20/2002

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/252,690

Applicant(s)

YONEMOTO ET AL.

Examiner

James M Hannett

Art Unit

2612

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-15 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 22 February 1999 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on ____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☒ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 4.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). ____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

Art Unit: 2612

DETAILED ACTION

Drawings

Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 8-12, and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by USPN 4,835,617 Todaka et al.

As for Claim 1, Todaka teaches on Column 1 the use of a MOS sensor-type image pickup device. Todaka teaches the use of an array of photodiodes arranged in a matrix form. Therefore, Todaka teaches the use of pixels having photoelectric conversion units to produce a signal from incident light arranged in rows and columns. Todaka teaches on Column 1, Lines 65-68 the use of a horizontal scanning circuit and a vertical scanning circuit. Todaka teaches on Columns 3 and 4, Lines 59-68 and Lines 1-5 that a reading operation for a signal of a pixel in one row and an electronic shutter operation or (resetting) for a signal in other row are carried out at the same time during one pixel period.

Art Unit: 2612

As for Claim 2, Todaka teaches on Column 4, Lines 1-5 that at the time the read scanning circuit reads the picture element (1, m), the reset scanning circuit resets or performs an electronic shutter operation on the picture element (1+n, m). Therefore, the reading operation of a signal of a pixel in one column in the one row (1, m) and an electronic shutter operation for a signal of a pixel in the one column in the other row (1+n, m) are performed at the same time.

In regards to Claim 3, Todaka teaches on Column 4, Lines 1-5 that at the time the read scanning circuit reads the picture element (1, m), the reset scanning circuit resets or performs an electronic shutter operation on the picture element (1+n, m). Todaka teaches on Column 4, Lines 23-43 that when the pixel at location (1, 2) is read an electronic shutter operation is performed for the pixel at location (2, 2). Next a read operation is performed for the pixel at location (1, 3) when an electronic shutter operation is performed for the pixel at location (2, 3). Therefore, the reading operation of a signal of a pixel in one column in the one row (1, 3) and an electronic shutter operation for a signal of a pixel in a column adjacent to the one column in the other row (2, 2) are performed at the same time.

In regards to Claim 4, Todaka teaches and depicts in Figure 3 that read scanning pulses and electronic shutter scanning pulses are supplied from both the horizontal and vertical scanning circuits. Todaka teaches that to read the data from the photodiode (113) or to perform an electronic shutter operation, pulses need to be supplied to the gates of MOS's (131), and (132) from the vertical scanning circuit and the horizontal scanning circuit.

As for Claim 5, Todaka teaches on Column 5, Lines 13-51 and depicts in Figure 5 that one pulse is supplied for each pixel as the read scanning pulse, and one pulse is supplied for each pixel as the electronic shutter scanning pulse. Todaka depicts in Figure 5 that the read scanning

Art Unit: 2612

pulse and electronic shutter scanning pulse are supplied at a timing at which the phases of the read scanning pulse and the electronic shutter scanning pulse do not overlap.

As for Claim 8, Claim 8 is rejected for the reasons discussed above related to claim 1, since claim 8 is substantively equivalent to claim 1.

As for Claim 9, Claim 9 is rejected for the reasons discussed above related to claim 2, since claim 9 is substantively equivalent to claim 2.

In regards to Claim 10, Claim 10 is rejected for the reasons discussed above related to claim 3, since claim 10 is substantively equivalent to claim 3.

In regards to Claim 11, Claim 11 is rejected for the reasons discussed above related to claim 4, since claim 11 is substantively equivalent to claim 4.

As for Claim 12, Claim 12 is rejected for the reasons discussed above related to claim 5, since claim 12 is substantively equivalent to claim 5.

In regards to Claim 15, Todaka teaches on Column 2, Lines 65 the use of a camera comprising an image sensor, a lens, a stop, a driving circuit for driving the sensor, a camera circuit for producing a television signal from the output of the image sensor and a control circuit. Todaka teaches on Column 1 the use of a MOS sensor-type image pickup device. Todaka teaches the use of an array of photodiodes arranged in a matrix form. Therefore, Todaka teaches the use of pixels having photoelectric conversion units to produce a signal from incident light arranged in rows and columns. Todaka teaches on Column 1, Lines 65-68 the use of a horizontal scanning circuit and a vertical scanning circuit. Todaka teaches on Columns 3 and 4, Lines 59-68 and Lines 1-5 that a reading operation for a signal of a pixel in one row and an electronic shutter

Art Unit: 2612

operation or (resetting) for a signal in other row are carried out at the same time during one pixel period.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6, 7, 13, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 4,835,617 Todaka et al in view of USPN 4,954,895 Akimoto et al.

As for Claim 6, Todaka teaches and depicts in Figure 3 that to read the data from the photodiode (113) pulses need to be supplied to the gates of MOS's (131), and (132) from the vertical scanning circuit and the horizontal scanning circuit. Todaka teaches an operation of reading a signal charge obtained by the pixel in the photoelectric conversion unit (113), to a signal line (149) is controlled by the product between a vertical scanning pulse (OY1) and a horizontal read pulse (OX1). Todaka teaches and depicts in Figure 3 that read scanning pulses and electronic shutter scanning pulses are supplied from both the horizontal and vertical scanning circuits. Todaka teaches that to read the data from the photodiode (113) or to perform an electronic shutter operation, pulses need to be supplied to the gates of MOS's (131), and (132) from the vertical scanning circuit and the horizontal scanning circuit.

Todaka is silent on the use of connecting to the signal line a charge detection amplifier for converting the read signal charge into a voltage signal.

Art Unit: 2612

Akimoto et al teaches on Column 11, Lines 30-34 that it is commonly known in the art to have an amplifier on the signal line to enable the charge from the photoelectric conversion element to be amplified and converted into a voltage.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have a charge detection amplifier as taught by Akimoto et al connected to the signal line of Todaka et al in order to enable the charge from the photoelectric conversion element to be amplified and converted into a voltage.

In regards to Claim 7, Todaka teaches on Column 5, Lines 13-51 and depicts in Figure 5 that one pulse is supplied for each pixel as the read scanning pulse, and one pulse is supplied for each pixel as the electronic shutter scanning pulse. Todaka depicts in Figure 5 that the read scanning pulse and electronic shutter scanning pulse are supplied at a timing at which the phases of the read scanning pulse and the electronic shutter scanning pulse do not overlap.

As for Claim 13, Claim 13 is rejected for the reasons discussed above related to claim 6, since claim 13 is substantively equivalent to claim 6.

In regards to Claim 14, Claim 14 is rejected for the reasons discussed above related to claim 7, since claim 7 is substantively equivalent to claim 14.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. USPN 6,449,014 Throngnumchai; USPN 4,870,493 Izawa et al; USPN 5,336,879 Sauer; USPN 5,115,293 Murayama et al; USPN 4,067,046 Nakatani et al.
